Objective

Diploma holder in **Cloud and Cyber Security**, aspiring to build a career as a **System Administrator**. Possess strong foundational knowledge in Linux administration, networking, and security practices, with hands-on exposure to system configuration, troubleshooting, and virtualization. Eager to apply technical skills, ensure system reliability, and contribute to secure and efficient IT operations while continuously learning and growing in the field of system administration.

Professional Responsibilities | Linux System Administrator

- Installed, configured, and maintained multiple Linux distributions (RHEL, Ubuntu, CentOS) as well as Windows servers, ensuring optimized performance, stability, and reliability.
- Designed and administered partitioning schemes, Logical Volume Management (LVM), swap space, and filesystem extensions to optimize storage utilization and meet evolving business needs.
- Diagnosed and resolved hardware, operating system, and network-related issues, significantly reducing downtime and improving overall service continuity.
- Implemented Rsync and scheduled automated cron jobs for routine backups, ensuring data integrity, business continuity, and reliable disaster recovery.
- Developed and maintained Bash and Python scripts to automate repetitive administrative tasks, reducing manual intervention and enhancing operational efficiency.
- Administered user accounts, groups, permissions, and directory structures while enforcing security best practices to protect systems and sensitive business data.
- Performed software installation, patch management, and updates using YUM, APT, and RPM package managers to maintain secure and up-to-date environments.
- Deployed and managed monitoring tools (Nagios, Zabbix, etc.) to track system health, detect bottlenecks, and recommend improvements for performance and scalability.
- Implemented and enforced security policies, including firewall configurations, SELinux hardening, intrusion detection, and regular vulnerability assessments to mitigate risks.
- Designed and executed robust backup strategies, performed recovery drills, and maintained disaster recovery documentation to ensure compliance and business resilience.
- Configured and maintained essential network services such as DNS, DHCP, NFS, and VPN; monitored network performance and resolved connectivity issues efficiently.
- Collaborated with IT teams to integrate systems, supported cross-platform environments, and documented all procedures for operational excellence.
- Mentored and guided junior administrators, promoting knowledge sharing, process improvement, and a culture of continuous technical growth.
- Assisted in cloud-based infrastructure management, including provisioning virtual machines and managing hybrid environments for scalability and testing needs.
- Participated in IT audits and compliance checks, ensuring systems adhered to organizational and industry security standards.

Skills & Expertise

- **Linux Administration:** Strong proficiency in managing Linux environments, including user and group administration, file permissions, process control, and system performance optimization.
- **User & Group Management:** Experienced in creating, configuring, and securing user/group accounts with effective permission handling to ensure system integrity and data security.
- **Shell Scripting:** Skilled in writing and maintaining Bash scripts to automate administrative tasks, streamline workflows, and reduce manual intervention.
- **Package Management:** Proficient in software installation, updates, and dependency management using YUM, APT, and RPM, ensuring stable and up-to-date systems.
- **Filesystem & Storage Management:** Knowledgeable in managing Ext4 filesystems and configuring Logical Volume Management (LVM) to optimize storage allocation and scalability.
- **Networking:** Hands-on experience with network configuration, managing interfaces, securing SSH, and implementing firewall rules to maintain reliable and secure connectivity.
- **Security Configuration:** Experienced in configuring SELinux/AppArmor, managing firewall policies, and applying file encryption (GPG) to safeguard sensitive data and maintain compliance.
- **Virtualization:** Practical experience with VirtualBox and KVM for deploying, managing, and isolating virtual environments to support testing, scalability, and system administration tasks.

Personal Skills

- Strong problem-solving and analytical thinking
- Good communication and teamwork skills
- Time management and task prioritization
- Attention to detail and system monitoring awareness
- Ability to work under pressure and handle incidents
- Basic documentation and reporting skills
- Self-motivated with a continuous learning mindset

Certifications

- | | |
|---|------------|
| • EduQual RQF Level 3 Diploma in Cloud Cyber Security | |
| • Internship Training Program – Al Nafi International College | 2025-20226 |
| Govt College of Management Science Kohat | 2022-2023 |
| DIT: Diploma in Information Technology | |

Education

2020-2022

- 4. FS.C Computer Science**
- 5. Govt College, Pakistan**
- 6. Diploma in Cloud Cyber Security (EduQual RQF Level 3)**
- 7. Alnafi International College**
