

INTERNSHIP EXPERIENCE LETTER

This letter certifies that **Mr. Naimat Ullah** successfully completed an intensive, hands-on Job Training Program as part of **Diploma in Cloud Cyber Security (EduQual Level 3)** at Al Nafi International College from **Februry 2025 to Februry 2026**. The training was delivered on our proprietary [Al Nafi Cloud Platform](#), a state-of-the-art lab environment that simulates real-world IT infrastructure, providing him with practical, experiential learning.

Throughout his training, Mr. Naimat Ullah Hussein demonstrated strong commitment and aptitude by completing a rigorous series of labs, developing foundational to intermediate skills in key areas of modern DevOps and cloud-native technologies.

Key Competencies and Practical Skills Demonstrated:

1. Advanced Task Automation with Cron

Developed a strong understanding of scheduled automation by working with the Cron daemon. Practiced creating and managing crontab entries to execute repetitive system tasks, such as backups and maintenance scripts, at specific intervals. Focused on the precision of cron syntax to ensure reliable task execution without manual intervention.

2. Systemd Timers & Service Management

Gained hands-on experience in modern Linux automation using systemd timers and service units. Completed labs on setting up timer-based triggers for services, providing a more robust and log-friendly alternative to traditional cron jobs. This involved creating unit files and utilizing systemctl to monitor and manage automated background processes.

3. Python Data Structures & Tuple Management

Explored Python's core data structures with a focus on tuples and their immutable properties. Developed scripts to store and access ordered collections of data, ensuring data integrity for fixed datasets. Practiced indexing and unpacking techniques, which are essential for handling returning values from functions and managing structured information within Python applications.

4. Shell Scripting & Execution Permissions

Refined shell scripting skills by creating and modifying scripts to handle automated workflows. Gained proficiency in utilizing chmod to manage execution permissions, ensuring that scripts are properly authorized to run within the Linux environment. This area focused on the transition from writing plain text commands to developing executable system utilities.

5. Automated Script Debugging & Log Analysis

Focused on the iterative process of debugging automation scripts by analyzing system logs and command outputs. Practiced identifying failures in automated tasks and resolving path issues or environment variable conflicts. This ensured that scheduled tasks run successfully in the background and that errors are caught and corrected promptly.

6. Filesystem Interaction & Script Editing

Demonstrated proficiency in using terminal-based text editors to modify configuration files and automation scripts. Managed the creation and relocation of script files across the filesystem, ensuring they are placed in appropriate directories for system-wide or user-specific execution. This training emphasized organized file management as a precursor to successful automation.

7. Environment Configuration & Variable Handling

Gained experience in setting up the development and execution environment for Python and Bash scripts. Worked with environment variables to ensure that scripts have the necessary context to perform system-level operations. This involved understanding how shell environments impact the behavior of scheduled tasks and automated services.

8. Resource Monitoring for Automated Tasks

Practiced monitoring the impact of automated tasks on system resources. Utilized Linux monitoring tools to ensure that scheduled scripts do not cause performance bottlenecks or resource exhaustion. This area highlighted the importance of writing efficient code for background processes to maintain overall system stability.

Performance & Learning Journey: Mr. Naimat Ullah training was assessed through automated, detailed lab reports from the AI Nafi Cloud Platform. His performance shows a consistent and commendable learning curve, often achieving high scores (75% - 90%) on complex labs. He effectively utilized detailed feedback from partially completed labs to improve and advance, demonstrating resilience and problem-solving skills.

In summary, Mr. Naimat Ullah is a diligent individual who has earnestly acquired practical, job-ready skills. He has proven his capability with the tools and technologies that underpin modern IT operations and software development. We are confident he will be a valuable asset to any team and wish him the utmost success in his future endeavors.

Sincerely,

Muhammad Yousaf Riaz
Director Academic Operations
